Таблицы перевода угловых размеров в линейные. Изд. 3-е. Цвелодуб Н. И. Киев, «Техніка», 1978. 96 с.
В справочнике приведены прямоугольные координаты точек на окружности для радиусов от 10 до 99 и для центральных углов от 0°30′ до 89°30′. Предназначен для расточников, шлифовщиков, фрезеровщиков, разметчиков, а также может быть полезен конструкторам, технологам и мастерам ОТК.

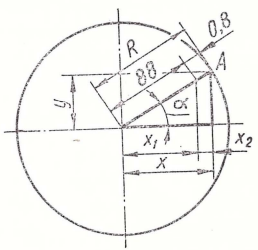
ВСТУПЛЕНИЕ

При конструировании технологической оснастки, составлении технологических карт, обработке деталей на координатно-расточных станках и разметке часто возникает потребность в переводе угловых размеров в линейные. При этом приходится перемножать многозначные числа, на что тратится много времени. Таблицы перевода угловых размеров в линейные дают возможность сократить время расчетов в 15—20 раз.



Линейные размеры (координаты), приведенные в таблицах, вычислены с помощью восьмизначных таблиц тригонометрических функций по формулам $x = R \cos \alpha$ и $y = R \sin \alpha$, где x— прилегающий катет, y — противолежащий катет, R — гипотенуза (радиус окружности) и α — центральный угол. Результаты округлены до четырех знаков после запятой.

Таблицы составлены для радиусов от 10 до 99 и для углов от 0° 30′ до 89° 30′ (через 30′). Примеры определения координат для радиусов, меньше 10 и больше 99 или выраженных дробным числом, приведены ниже:

Пример I. Определить координату x точки A (см. рисунок), если радиус окружности равен 88,8 мм или см, м и т. д. и $\alpha = 10°$.

По таблице определяем, что:

для радиуса 88 мм $x_1 = 86{,}6631$ мм;

для радиуса 0,8 мм $x_2 = 0{,}78786$ мм,

где 0,78786 — координата x при радиусе 80 мм, уменьшенная в 100 раз.

$x = x_1 + x_2 = 86{,}6631 + 0{,}78786 = 87{,}45096 \approx 87{,}451$ мм.

Аналогично определяют и координату y.

Пример II. Определить координату x, если радиус окружности равен 188,8 мм и $\alpha = 10°$.

По таблице определяем, что:

для радиуса 180 мм $x_1 = 177{,}265$ мм (координата x при радиусе 18 мм, увеличенная в 10 раз),

для радиуса 8,8 мм $x_2 = 8{,}66631$ мм (координата x при радиусе 88 мм, уменьшенная в 10 раз).

Прибавив найденные величины, получим искомую координату:

$$x = 177{,}265 + 8{,}66631 = 185{,}93131 \approx 185{,}931 \text{ мм}.$$
